BETH - Blockchain for Sustainability, 2019

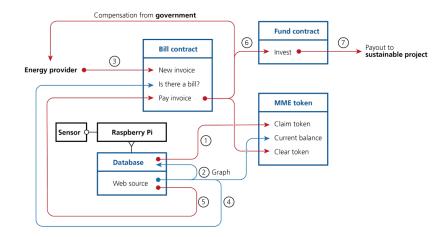

Concept

Current Implementation

Disruptive Potential and Further Development

Status quo

- Simplified & automated billing thanks to smart contracts
- Secured data transmission and storage on the Blockchain
- IoT devices to monitor energy consumption
- Could be a step toward a decentralized energy grid

Consumer benefits

- Relevant visualization and live tracking as incentive
- Fully interactive reward system: amount and destination of reinvested saved cost is up to the consumer
- Consumers gain power and control the amount and destination of reinvested saved cost
- New paradigm: when the consumer saves energy, he does not only pay less, he also earns more
